RESUME OBJECTIVE

I am a Full-Stack Web / Mobile developer with 8+ years of experience.

My good attitude to Clients and genuine interest in JS / PHP / Python frameworks led my life lead to success. I think that there may be a failure in my life, but failure is the source of innovation and success.

1. I have experienced building some big websites and working in web technologies such as JavaScript, NodeJS, Express, Python, Java, PHP, Laravel, CodeIgniter for 6+ years.
2. I have attended to develop Android / iOS projects for 2 years.
3. I have already finished more than 20 projects related to Javascript, React, React Native, Vue, PHP, Laravel, Python, Django, Flask, Android, Swift.

I keep code review rules and have abilities following:

- code standards, unit tests are important steps for improving code quality
- I use an automated application for analyzing code that has an irregular action that doesn't follow guidelines.
- Tools like GitHub, Pull Request allow us to review codes and comment on it before it's merged and pushed.
- Capability to work well with other developers
- 40+ hours per week and Flexible working hours

As a Senior Full-Stack Developer, I have completed the structure and systems for HTML / CSS / React / PHP code reviews.

While I develop React / PHP / .NET Core, I found the most important thing that "Code is written by one but read many times by many people"

This means that you should avoid fancy or tricky coding.

If you didn't do it, the coding wasn't written well.

EXPERIENCE

Hitachi

November 2018 – March 2020

Yutaki M operation and selling platform

Main advantages from this project and my experiences are:

- Vue.js + TypeScript + SCSS
- Node.js, GraphQL, AWS Cloud Service, Lambda function
- File generation libraries like jsPDF, FPDF

InsideAsia

June 2017 – September 2018

Project description This site is for helping to travel ASIA.

My clients wanted me to build TypeScript 3.4 for UI and Nodejs for the backend.

I built many pages and RESTful API, Nodejs.

Then I deployed it at AWS.

QueenGarnet

June 2015 – April 2017

This site is for selling Queen garnet.

My clients wanted me to implement features as a shopping platform for all garnet products.

Main Teach:

- Frontend features with React / Redux / ContextAPI
- Laravel / AWS Cloud Service / MySQL
- Mail Notification, Payment integration

I have been always satisfying my client with my best quality and I keep the deadline absolutely.

If you want to use my genuine ability, please contact me.
